HIGH RESOLUTION COLOUR PRINT CARTRIDGE

Part Number: 10N0026

Product Description/Positioning

The Lexmark High Resolution Colour Print Cartridge enables the Lexmark technology to achieve the highest level of print quality. Due to the precision of the Excimer laser, Lexmark's colour cartridge features even smaller nozzle holes, which produce 7 picoliter ink drops. The result is sharper images and better, smoother blending of colours.

Customer Benefits

- **A new cartridge, a new print head Like a brand new printer!**
All Lexmark inkjet cartridges have the actual print head, there where the core inkjet technology lies, integrated to the cartridge bottle. The main advantage to having the print head as an integrated part to the cartridge is that Lexmark customers get a new print head with each cartridge replacement! This is each time like getting a brand new printer all over again! No risk of deterioration of the print head (and therefore a decrease in quality) during the life of the printer as can be the case with other manufacturers who integrate the print head as a fixed part inside the printer itself.
- **Resolution: up to 2400x1200 dpi with the black and colour cartridges 10N0016/26 on Lexmark Z33!**
2400x1200 dots per inch is the ability that Lexmark print heads have to place individual droplets of ink accurately on a 2400x1200 matrix per square inch of paper. Extreme precision and high resolution lead to the first class print quality provided by Lexmark print heads.
- **The brightest and widest colour ink spectrum!**
The High Resolution Colour Print Cartridge (10N0026) benefits from Lexmark's most advanced cyan, magenta and yellow ink formulations. For all the colour inks Lexmark chooses to use dye-based inks because of their unique ability to create richer and brighter colours, a wider colour ink spectrum and light fastness. The Lexmark 7 picoliter colours cartridge provides high quality photo quality without the need for a separate photo cartridge.
- **The ink saving printing mode!**
All Lexmark printer drivers offer a choice of printing modes based on the quality required and the time available to our customers. The Quick Print mode (600x300 dpi) uses less than 50% of the ink quantity used in higher printing modes and provides a maximum print speed while still ensuring a more than acceptable quality. The Quick Print mode enables you to use the ink in an economical and efficient way based on your specific needs!

Product Specifications

Resolution : Up to 2400x1200 dpi for top of the line quality output! (with Lexmark Z33 Color Jetprinter)

Nozzles : 192 laser-crafted nozzles

Ink Chemistry : dye-based

Drop size : 7 picoliter

Average Yield : 275 pages @ 15% coverage (Normal Print mode, 600x600 dpi)

UPC Code : 7-34646-53986-9

Product Compatibility

Lexmark
Lexmark Z13 and Z33 Color Jetprinter
Compaq
Compaq IJ650
