HP AIT-2 50/100GB data cartridge

→ wo man kauft

Merkmale und Vorteile

- ◆ HP AIT drives and media employ a helical scan recording method in which data tracks are written at an angle with respect to the edge of the tape. This technique requires fewer passes over the drive heads to fill the tape and thus greatly extends the life span of both the drive and media.
- ◆ HP AIT data cartridges contain an Advanced Metal Evaporated (AME) recording layer consisting of almost 100% cobalt. This, combined with the Diamond-Like Carbon (DLC) coating, creates a smooth and hard surface. AME technology provides a high recording density, improved signal-to-noise ratio and significantly lower tension to improve the longevity of the media.
- ◆ MIC (Memory in Cassette) is a 64k memory chip which is embedded in all HP data cartridges. It allows high-speed media load, file search and read/write operations. MIC offers fast load and unload times and access to data in less than 27 seconds from anywhere on the tape.
- ◆ Optimum compatibility with HP StorageWorks AIT drives and libraries and AIT drives and libraries from other manufacturers.
- ◆ Limited lifetime warranty

Kompatibilität:

hp AIT - 50/100 GB Tape Drive
